

Nordic Forest and Wildlife Management

Study program of 30 ECTS credits, mid February to mid June

Evenstad – the place for wild hearts

Norway

Hedmark University College
Campus Evenstad

Nordic Forest and Wildlife Management 30 credits

Are you interested to learn more about Nordic and Norwegian natural ecosystems? Do you want to observe moose in the forest or follow the fresh tracks of bears and wolves in the snow? Are you interested in Norwegian forestry techniques? Or the interactions and arising conflicts between man and environment?

Join in at Evenstad for 4 months from mid February to mid June and follow some or all courses of our Nordic Forestry and Wildlife Management program.

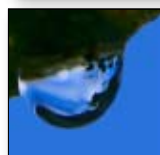

Nordic Ecosystems (5)

You get an introduction to Nordic climate and vegetation, historical use of natural resources, and development of land use regulations of wildland areas. Excursions included!

Silviculture and Forest Management (5)

All you need to know about Scandinavian forests: their ecology, management, historical and current use, silvicultural practices. 4 field days.

Freshwater Ecosystem Management (5)

Freshwater ecosystems are highly fragile. You learn about water quality, aquatic organisms, and fish as an economic resource. And yes, you'll go fishing.

Wildlife Management (5)

We focus on the ecology and management of different wildlife species. Conservation, harvest, monitoring, human dimensions. And moose sightings guaranteed!

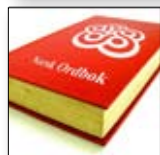

Carnivore Ecology and Management (5)

Large carnivores are back, and with them old and new conflicts with human interests. Get to know the Nordic species, also in the field, and learn about the conflicts.

Forest Engineering (5)

You will gain insight into the various systems of operation used in Norwegian forestry, and the chain of transport from tree stump to yard or industrial site.

Norwegian language (5)

Did you ever wonder about how to pronounce å, æ, and ø? You will learn to read and communicate in Norwegian, and you will learn about Norwegian cultural peculiarities.

Situated in a marvellous landscape of forests, mountains and lakes, Evenstad offers students interested in natural ecosystems and outdoor recreation a great platform for study. Thanks to an active research environment with an international reputation, courses are updated with the latest findings.

Curious? Find out more about Evenstad and our study program, including application form, on the English web sites of www.hihm.no. Or send an e-mail to international@hihm.no.
