

Dear exchange student!

We kindly please you to fill in the questionnaire and send it back to us by email as soon as possible.

We post your answers in our website to promote student exchange mobility, if you agree. If you don't agree please let us know!

Juan Aguilera Salcedo

1. Where do you come from and what do you study back home? I'm from Spain and I study a double degree in Chemical Engineering and Environmental Engineering

2. Why did you choose Slovenia as your exchange country and why did you choose Environmental Protection College (EPC) as your exchange higher education institution?

I chose Slovenia due to its different culture and because it was an unknown but thrilling country for me. I chose the EPC because it has and study plan similar to the one I partake in Spain.

3. What do you think of Velenje/Slovenija? Velenje is a small but homely place, surrounded by beautiful nature. It has a slow paced life and it is very different from the city I live in. Slovenia is small country but it's full of exciting places which I have loved to discover. The natural environment is one of the main attractions of this country and that is something that I enjoy getting to know. The people of Slovenia are also very homely and they always try to help you, no matter which is your problem.

4. What do you think of your host institution – Environmental Protection College (EPC)?

It has a great study program and helps greatly each one of its students, but I miss having several activities in which I could take part in order to fully enjoy the experience in Velenje, and also to meet more of the students of the EPC.

5. Are you satisfied with the way your study at the EPC is going? Yes, but sometimes as an Erasmus student I feel that the teachers can't address their subjects in a way that the subject's objectives and topics are clearly transferred to me.

6. What are your main professional interests in and how do you see your future career?

I have a general interest in the effects of pollutants on the environment and their chemistry, as well as in nature preservation and environmental remediation. I would like to start my own company or perhaps work for a company dedicated to any of the mentioned topics.
